Summary

Software Engineer | Full-Stack with 1.6+ years of experience building AI orchestration platforms. Proven expertise in leading React-based frontend systems and developing high-performance asynchronous backend using FastAPI and Node.js.

Skills

Languages: C++, JavaScript, Python, MySQL

Technologies & Tools: React.js, Tailwind CSS, Node.js, Express.js, FastAPI, REST API, MongoDB, PostgreSQL, Redis, AWS (EC2, S3, SQS), Docker, Git, Postman

Technical Experience

Software Engineer, Estrel AI – Hyderabad, Telangana Nov 2024 – Present

- **Product Development: Leading frontend development** as a core Full-Stack contributor to Product - WiiZ Atlas of a node-based workflow editor using React.js and React Flow, creating a highly interactive canvas supporting up to **50%** interconnected nodes.
- **Workflow Execution Engine:** Developed the backend orchestration using FastAPI and AWS SQS, successfully handling **1,000+ concurrent execution messages** via a decoupled producer-consumer pattern. Implemented Kahn's Algorithm to ensure **100%** deterministic node sequencing.
- **Knowledge Base & RAG Pipeline:** Engineered an automated ingestion pipeline that processed **10,000+ document chunks** into the **Milvus Vector Database**. Optimized LLM operational costs by **40%** through an intelligent tiktoken-based trimming logic (8,000 token ceiling) and achieved **sub-300ms retrieval latency** for semantic search queries.
- **Microservices Development:** Designed and deployed 4 Flask microservices for Route Optimization, reducing API response time by **35%** and achieving **99%** uptime.
- **Technologies:** Python (FastAPI, Flask), Node.js, React.js, React Flow, AWS (SQS, S3), Redis, MySQL, PostgreSQL, Milvus (Vector DB), JWT, Docker.

Software Developer Trainee, Nupeak IT Solutions Pvt Ltd – Ahmedabad Feb 2024 – Aug 2024

- Contributed to 2 client projects (pharma + public sector) using SAS across frontend, backend, and database layers, saving 6 hours of manual reporting per week.
- Built **10+** dynamic dashboards in SAS VA, improved data visualization and insights for key stakeholders.

Projects

StudyNotion: Full-Stack Ed-Tech Platform Live link

- Built a fully functional ed-tech platform that allows users to create, consume, and rate educational content, while enabling instructors to showcase their expertise globally.
- Key features include: User authentication with OTP and JWT for security. Razorpay integration.
- Tools Used: ReactJS, Tailwind CSS, Redux, Node.js, Express.js, MongoDB, JWT, Bcrypt, Mongoose, Razorpay, Cloudinary.

DumpAI: Intelligent Multi-Modal Personal Knowledge Vault Live Link | Github

- A Scalable, multimodal knowledge vault allows users to dump unstructured data (PDF, Image, Text) into a secure vault, utilizing pgvector to enable natural language 'semantic recall' with a **0.5s** average response time.
- Implemented Asynchronous Ingestion Pipeline, Hybrid Semantic Search, Multi-Modal Data Extraction, **RAG** and Security.
- Tools Used: FastAPI (Python), SQLAlchemy, Bcrypt, JWT, RAG, pgvector, Llama 3 (Groq), Sentence-Transformers, Tesseract OCR, AWS (EC2, SQS, S3), Supabase (PostgreSQL), React, Tailwind CSS, Vercel, Docker.

Education

Poornima University, Jaipur, Masters in Computer Application (MCA) Aug 2022 – Apr 2024

- CGPA: 8.31/10

Kanoria College, Jaipur (Rajasthan University), Bachelors in Computer Application (BCA) Apr 2019 – June 2022
